

Euler's phi function

x invertible mod n
 $\Leftrightarrow \gcd(x, n) = 1$

DEF $\phi(n) = \#$ invertible residues mod n
 $= \#$ of integers in $\{1, 2, \dots, n-1\}$
coprime to n

EG $\phi(p) = p-1$ "all residues mod p invertible except 0"
prime

EG $\phi(8) = 4 = 8 - \frac{8}{2}$ "all residues except multiples of 2"
invertible residues mod 8: 1, 3, 5, 7

EG $\phi(p^n) = p^n - \frac{p^n}{p} = p^n - p^{n-1}$ "all residues except multiples of p "
 $\Leftrightarrow \gcd(x, p^n) = 1$
 $\Leftrightarrow p \nmid x$ (p does not divide x)
 x invertible mod p^n

THM ϕ is multiplicative:
 $\phi(nm) = \phi(n)\phi(m)$ if $\gcd(n, m) = 1$

CRT: $x \pmod{n \cdot m} \xleftrightarrow{\text{CRT}} \begin{matrix} x \pmod{n} \\ x \pmod{m} \end{matrix}$

EG $\phi(1000) = \phi(2^3) \cdot \phi(5^3) = (2^3 - 2^2)(5^3 - 5^2)$
 $= (8-4)(125-25) = 400$
 $2^3 \cdot 5^3$

EG $\phi(980) = \phi(2^2) \phi(5) \phi(7^2) = (2^2 - 2)(5 - 1)(7^2 - 7)$
 $= 2 \cdot 4 \cdot 42 = 336$
 $2^2 \cdot 5 \cdot 7^2$
