

Midterm #2 – Practice

Please print your name:

Bonus challenge. Let me know about any typos you spot in the posted solutions (or lecture sketches). Any typo, that is not yet fixed by the time you send it to me, is worth a bonus point.

Problem 1.

- (a) Find all eigenfunctions and eigenvalues of

$$y'' + \lambda y = 0, \quad y'(0) = 0, \quad y'(3) = 0.$$

- (b) Find all eigenfunctions and eigenvalues of

$$y'' + \lambda y = 0, \quad y'(0) = 0, \quad y(3) = 0.$$

Problem 2. Let $y(x)$ be the unique solution to the IVP $y'' = x + 2y^3$, $y(0) = 1$, $y'(0) = 2$.

Determine the first several terms (up to x^4) in the power series of $y(x)$.

Problem 3. Consider the DE $y'' = x(x^2 + 7)y' + (x^2 + 3)y$.

Derive a recursive description of a power series solution $y(x)$ (around $x = 0$).

Problem 4. Find a minimum value for the radius of convergence of a power series solution to $(4x^2 + 1)y'' = \frac{3y' - y}{x + 1}$ at $x = 3$.

Problem 5. Consider the function $f(t) = 2(1 - t)$, defined for $t \in [0, 1]$.

- (a) Sketch the Fourier series of $f(t)$ for $t \in [-4, 4]$.
- (b) Sketch the Fourier cosine series of $f(t)$ for $t \in [-4, 4]$.
- (c) Sketch the Fourier sine series of $f(t)$ for $t \in [-4, 4]$.

In each sketch, carefully mark the values of the Fourier series at discontinuities.

Problem 6. A mass-spring system is described by the DE $my'' + 7y = F(t)$ where $F(t)$ is an external force with period 3. For which values of m can resonance occur?
